

Name : Muhammed Said
Surname : Kaya
Student ID : 21627428

fireDriver: Participants in the system suggest fireDriverProposal and in the approval function (approveFireDriver), if the number of yes is more than half the number of participants, the direct taxi driver can be fired and the need for a manager can be eliminated.

setDriver - proposeDriver: In the system (proposeDriver), in the confirmation function (approveDriverProposal), if there is a proposal to assign a taxi driver given by the people involved in the investment, if the number of yes is more than half the number of participants, the driver can be assigned directly. Thus, there is no need for a manager.

purchaseCar: If the yes number in approvePurchaseProposal is more than half the number of participants, the vehicle can be purchased directly. Thus, there is no need for a manager.

setCarDealer: Participants in the system suggest carDealerProposal and in the approveCarDealer function, if the number of yes is more than half of the number of participants, the need for a manager can be eliminated by directly assigning a carDealer.

As the other payCarExpense and payDividend functions require a payment every 6 months, it seems to be done by an manager.
